

Sometimes one is greater than two.
So, we created the alliance between
the Port of Seattle and Port of Tacoma.

SARENS, KBR LIFT CORPUS CHRISTI COMPONENTS

Crane rental firm Sarens Group and engineering firm Kellogg, Brown & Root collaborated to carry out heavy-lifting work for a construction and expansion project at an oil refinery in Corpus Christi, Texas.

The firms delivered and installed two large reactors, a staircase module and platforms for the project. The project team from Sarens utilized three cranes – a Terex RT90 rough terrain crane for general lifting duties as well as a Liebherr LR1350S crawler crane and Terex CC8800-1 lattice boom crawler crane for installation of installing hydrocracker reactor vessels.

“At the peak of the turnaround period, we had 15 Sarens team members working together to make sure everything went as planned. Everything went incredibly smooth and all the preplanning paid off,” said Sven Janssens, operations manager for Sarens USA.

A second phase is underway with the contract expected to conclude in November.

“The Corpus Christi project has two parts. The second part is lifting and installing 58 modules and two main equipment pieces during the life of the contract,” Janssens added.

Headquartered in Belgium, The Sarens Group provides heavy lifting and engineering expertise and equipment worldwide via a network of more than 100 subsidiaries in 54 countries.
