Sarens' Fast Response Saves the Day on Urgent Project Request

It was 16:00 on a Friday afternoon when Sarens in Australia got the call: could we mobilise our team and equipment and be at a job site by 7:00 on Monday morning? Sarens' engineering and project management teams immediately sprang to action, working closely with the client throughout the weekend and flying people in from across the country to make it happen. Within a couple of days the crew and equipment were on-site and ready to relocate two heavy concrete girders for the Botany Rail Duplication project.

Sarens' Precision-Guided SPMTs Help Send State-of-the Art Naval Vessel to Sea

When Sarens was asked to move a new 620T military vessel, we rose to the challenge and created a solution that would transport it smoothly from land to sea. The operation was executed over the course of four days in February 2023 on behalf of CMN Constructions Mécaniques Normandie.

Spotlight on Sarens in Angola

This month, Sarens shines the spotlight on Angola. Sarens entered Angola in 2021 as a heavy lifting and specialised transport service provider. In the past two years Sarens has established a strong presence in the country. Sarens currently has an office in the city of Luanda and a yard for storage and maintenance activities of our equipment in the city of Viana. Our fleet in the region includes mobile telescopic cranes (50-500T), lattice boom crawlers (100-600T), and other equipment available from our regional office in South Africa and our HQ in Belgium.

With Another Successful Turbine Installation, Sarens is Powering the Energy Revolution

Sarens is accelerating the world's energy transition, and as part of that work we have been installing wind turbines across the globe. On a recent project for client Vestas, on behalf of owner Besix, Sarens was entrusted with assembling a wind turbine in Bilzen, Belgium.
