Sarens Completes Historic Castle Tower Installation in Klaipeda

Sarens successfully completed in August 2024 a complex lifting operation as part of the restoration of the Klaipeda Castle in Lithuania. The project, commissioned by Klaipeda city municipality and executed in partnership with UAB Sigromas, involved installing a 20-meter high peak frame of a 47-metre tower at the historic site, marking a significant milestone in preserving the city's architectural heritage.

Sarens Designs Ingenious Solution to Replace Train Station Bridge in Luxembourg

Drawing on decades of experience in bridge removal and installation, Sarens was pleased to develop a custom-designed engineering solution to help our client, Tralux, replace the Emile Hammerl bridge at the Bettembourg train station. Sarens designed a special CS250 tilting system, created and used for the first time specifically for this project.

Spotlight on Sarens' Leading Role in Germany's Onshore Wind Sector

Germany remains one of Europe's most active markets for onshore wind energy, and Sarens is at the forefront, providing specialised crane solutions for turbine erection. With wind turbine sizes increasing - reaching up to 7MW with hub heights of 179m - the demand for heavy-lift, wind-dedicated cranes has never been greater. Since 2012, Sarens has been supporting onshore wind projects across the country, leveraging its fleet of high-capacity cranes and extensive expertise in turbine installation.
